

After ten months of being unemployed I was directed to CPS. Thanks to the training received at CPS by the great teaching staff especially from Daryl Patrishkoff, it helped me greatly in my engineering profession. Before I was even able to complete the Design Engineer course, I had several calls and a few interviews, even during those rough times throughout 2009

Right away I landed a great Senior Design Analyst job in Puerto Rico and I know it was clinched during the interview process just as I presented one of my certificates, Dimensional Management, the one they were looking for. I'm still aiming to get back to Michigan and I'm sure I'll again find something as this economy continues to make its way back to recovery.

Thank you CPS and Daryl Patrishkoff!

Mario Bengala

I have just recently completed Lean Six Sigma and PMP training at CPS. At this moment, I have not yet secured employment. I don't think this will last for long.

When I interview, Employers often ask what I have been doing since I have been unemployed. I respond by telling them that I went back to school to obtain these credentials that I feel are important in the new world order that is unfolding today. Employers are delighted with that response.

The training at CPS is for real. Real world situations are discussed from a student body that is made up of people that are outstanding in character and performance. They are all winners that will find employment successfully because they are driven to succeed no matter what challenges confront them.

The education experience was truly rewarding for me.

Dan Resmer

I used CPS for training and updating my skills for getting a job in a tough employment market. The training opened up new doors and opportunities that I wouldn't have if I didn't do the training. The instructors are very professional and experienced in all industries. I would definitely recommend CPS for training and education.

Thank You

Athear Salem

The instructors are first class, with a superb knowledge of the material and always go the extra mile to meet the needs of their students. I have come away from every class with much a deeper knowledge of the material at hand, and I have confidence that I will be a much heavier hitter in the job market

I have never gone to a school that has come close to matching their commitment to satisfy, serve and equip their customer--namely me--the student. Thanks Daryl, Cindy, Dennis, Lee, Steve and all the staff. Your instruction and service has been well worth the long drive I have to your school.

Regards,

Roger Williams

I wanted to inform you that this afternoon I verbally accepted a position at World Technical Services Inc. as the aero-thermal engineer and lead on the overall vehicle build of a Fuel Economy Demonstrator project for the US military. It is a position that I am extremely qualified for and very excited to start. Additionally, my starting salary is a substantial increase from my salary at Chrysler with better benefits.

If not for CPS sending my resume out to several different companies, I would never have heard of WTSI, would not have received an unsolicited interview request, and would have missed out on a great opportunity. Had it not been for my CPS training in Pro/E, Pro/Mechanica, and Project Management, and my attainment of a Designing Engineer certificate, I do not feel that I would have been a top candidate and also able to negotiate a salary increase in the current economic climate.

I want to thank you and all the friends I have made at CPS who helped to keep my confidence up when things were looking bleak, and gave me the additional tools to put me at the top of a very large talent pool.

Thank you and best regards,

Terry DeKoninck

I'm happy to report that I have received an offer for contract employment as Project Manager, initially working in Europe (Germany), leading to permanent hire, with KMT Robotic Solutions. I will be starting this Wednesday. This position is initially for six months with a plan for direct hire, unless the global economy takes a dump again. I will be managing a project supporting the manufacture of wind turbine blades so this is a perfect start in an industry that I have been studying for the last 3 years.

I'll let you know how it goes!

Thanks a million, for your help and support during this "very stressful period of drought".

Best regards,

Dirk Peter

I am sending a special thanks to all of my "Recommenders" on LinkedIn; I know for certain that the recruiter and hiring manager looked at my LI profile and that your input helped them to make a positive hiring decision about me. So this is official notice to let you all know that I have obtained full time employment as a mechanical engineer again. The job is a 12 to 18 month contract assignment with G-Tech Services to be a Product Quality Engineer at Caterpillar in Peoria, IL. Since it is short term I will be commuting back to Detroit when I can on the weekends.

Caterpillar needs to bring its entire product line into compliance with new tighter EPA regulations. They are going with the urea injection concept to accomplish this so the project team will have to deal with issues such as extra fuel consumption, excess heat, and finding somewhere to put the system on the vehicle. Specifically what I'll be doing is helping their Product / Design engineers with managing the APQP process. APQP is new to Caterpillar so that is why they are bringing people in from the auto industries that have some experience with it. Getting really excited about this because it is a great opportunity at a great company and a chance to build on some new skills, most importantly the company is fully behind our efforts.

Thanks again to all of you for your help, support, encouragement, and I will never forget it. I have to put in special thank you to Daryl Patrishkoff here for his excellent instruction and assistance, I WOULD NOT BE HERE IF NOT FOR YOU AND YOUR SCHOOL! Thank you for including me in your APQP class when you needed some extra butts in the seats!

Warmest Regards to all and hope to see to see you again very soon,

Kevin McCutcheon

It is an honor and a privilege to have graduated in Program Management Certificate Program from Center for Professional Studies in Troy, Michigan. The teaching was professional, practical, interactive and informative. The courses covered skill sets that are being sought after in the industry.

The teaching was unique, in the sense; it exhibited projects that were recently completed for each of the topics covered in the courses. This encouraged my sincere participation in the courses. I have thoroughly enjoyed the learning process at CPS where the student's needs and their individual learning abilities are put first.

I take this opportunity to wholeheartedly thank Daryl Patrishkoff and his excellent team of instructors for guiding me through the project work at CPS. I also thank Daryl for his vision, initiative, leadership, sincerity, communication, unwavering support and encouragement.

Without a hesitation, I would recommend CPS and Daryl to people who want to further their learning.

Sonny Veeramachaneni
